Project:

Unified Mentor – UI/UX Design

1. INTRODUCTION

Taskly is a minimalist mobile To-Do List application user interface designed to help users organize and manage their daily tasks in a simple, clean, and visually organized environment.

The interface focuses on simplicity, usability, visual hierarchy, and consistency. The design provides users with a clear view of their tasks, their deadlines, and their completion status without making the interface unnecessarily complicated.

The project was designed using Figma with a mobile-first approach. The interface uses a clean card-based layout, soft background colors, clear typography, status indicators, checkboxes, and intuitive icons to create a simple task management experience.

2. PROJECT OBJECTIVE

The main objective of this project is to design a clean, intuitive, and user-friendly mobile To-Do List application interface.

The design aims to allow users to:

- View their daily tasks easily.
- Add new tasks.
- Identify tasks based on their deadlines.
- Mark tasks as completed.
- Delete tasks when they are no longer required.
- Understand their task completion progress.
- Navigate the interface with minimal effort.

The project also aims to demonstrate the application of fundamental UI/UX principles such as visual hierarchy, spacing, typography, color consistency, alignment, and usability.

3. TOOLS USED

The following tools and resources were used to design the Taskly interface:

- Figma – Used for UI design, layout creation, and prototyping.
- Figma Prototype – Used to demonstrate the interaction flow of the interface.
- Lucide Icons – Used for simple and consistent interface icons.
- Inter Typeface – Used for headings, task names, labels, and supporting text.

4. DESIGN FEATURES

The Taskly interface contains several important UI elements designed to provide a simple and organized task management experience.

1. My Tasks Header

The main screen contains a clear "My Tasks" heading that immediately communicates the purpose of the application.

2. Date Display

A date is displayed below the main heading to provide context for the user's daily task list.

3. Add New Task Section

A dedicated "Add A New Task" section is provided near the top of the interface. The section uses a light blue background and a plus icon to make the action easily identifiable.

4. Task Cards

Each task is displayed inside an individual card. The card-based layout separates different tasks visually and improves readability.

5. Task Checkboxes

Each task contains a checkbox that allows users to identify whether a task is completed or still pending.

6. Today and Tomorrow Status Pills

Small rounded status pills are used to indicate whether a task is scheduled for today or tomorrow. This provides users with quick visual information about task timing.

7. Delete Icons

A red delete icon is placed on the right side of each task card. This provides a clear and recognizable action for removing tasks.

8. Completed Task State

Completed tasks are visually differentiated using a light green background, a checked checkbox, and strikethrough text. This allows users to immediately distinguish completed tasks from pending tasks.

9. Remaining Task Counter

A task completion indicator is displayed near the bottom of the interface to communicate the user's progress, such as the number of completed tasks out of the total number of tasks.

10. Minimal Card-Based Layout

The interface uses a clean card-based structure with sufficient spacing between elements. This reduces visual clutter and makes the interface easier to scan.

5. COLOR PALETTE

The Taskly interface uses a simple and consistent color palette to maintain a clean and modern appearance.

Background

Hex Code: #F8F9FA

Purpose: Main application background.

Primary Blue

Hex Code: #2563EB

Purpose: Primary UI elements, active elements, and important actions.

Light Blue

Hex Code: #EFF6FF

Purpose: Add New Task section and Today status elements.

Main Text

Hex Code: #1F2937

Purpose: Main headings and task names.

Secondary Text

Hex Code: #6B7280

Purpose: Supporting text and secondary information.

Green

Hex Code: #22C55E

Purpose: Completed task states and progress indicators.

Red

Hex Code: #EF4444

Purpose: Delete actions.

White

Hex Code: #FFFFFF

Purpose: Task cards and content areas.

6. TYPOGRAPHY

The Inter typeface was selected because of its clean, modern, and highly readable appearance, making it suitable for mobile application interfaces.

Typography specifications used in the design:

Font Family:

Inter

Main Heading:

28 px

Section Heading:

18 px

Task Text:

16 px

Supporting Text:

14 px

Status Text:

12 px

The typography hierarchy helps users distinguish between headings, task names, supporting information, and status indicators.

7. DESIGN PROCESS

The Taskly interface was developed through the following design process:

1. Requirement Analysis

The project requirements were analyzed to identify the required elements of a mobile To-Do List interface, including task cards, checkboxes, an add-task section, delete actions, and task status indicators.

2. Wireframe and Layout Planning

The basic mobile frame and placement of the major UI elements were planned before creating the final visual design.

3. Color Selection

A minimal color palette was selected using a soft gray background, white cards, blue primary elements, green completion indicators, and red delete actions.

4. Typography Selection

The Inter typeface was selected to provide a clean and readable visual appearance across different sections of the application.

5. UI Design

The final interface was created in Figma using mobile frames, cards, text elements, buttons, checkboxes, status pills, and icons.

6. Icon Implementation

Simple Lucide icons were used for actions such as adding and deleting tasks to maintain visual consistency.

7. Prototype Creation

The interface was prepared as a Figma prototype to demonstrate the designed application experience.

8. Final Refinement

The final design was reviewed and refined by adjusting spacing, alignment, colors, typography, card styling, status indicators, and visual hierarchy.

8. FINAL DESIGN

The final Taskly interface consists of a mobile To-Do List screen designed using a clean and minimal visual style.

The screen includes:

- My Tasks heading
- Current date
- Add A New Task section
- Task cards
- Task checkboxes
- Today and Tomorrow status pills
- Delete icons
- Completed task state
- Task completion indicator

The final design focuses on maintaining consistency between different UI elements while providing enough whitespace to keep the interface visually clean and easy to understand.

9. LEARNING OUTCOMES

Through this project, I gained practical experience in designing a mobile application interface using Figma.

The project helped me understand and apply several important UI/UX design concepts, including:

- Creating mobile frames and layouts in Figma.
- Establishing a clear visual hierarchy.
- Using consistent spacing and alignment.
- Selecting appropriate typography.
- Creating a consistent color system.
- Designing reusable UI elements.
- Using icons effectively.
- Creating different visual states for completed and pending tasks.
- Designing status indicators and task cards.
- Creating a simple interactive prototype.
- Improving usability through minimal and organized design.

10. FIGMA PROTOTYPE

The Taskly mobile application interface was designed and prototyped using Figma.

Figma Prototype Link:

<https://www.figma.com/proto/ymlA86QR17ZEsazbuEPdwr/to-do-tasks?node-id=56-3&t=jfEW1xVUpQ8xoibN-1>

The prototype demonstrates the overall visual design and interaction structure of the Taskly To-Do List application.

11. CONCLUSION

The Taskly To-Do List interface demonstrates how a simple and minimal design approach can be used to create an organized and user-friendly task management experience.

The project combines a clean card-based layout, consistent typography, a simple color palette, intuitive icons, status indicators, and clear task states to create an easy-to-understand mobile interface.

Working on this project helped me strengthen my understanding of UI/UX design principles, including layout design, visual hierarchy, color systems, typography, spacing, consistency, and prototyping in Figma.

Overall, the project provided practical experience in transforming a basic application concept into a structured and visually consistent mobile user interface.
